

Project Design Phase-I Solution Architecture

Date	16 October 2022
Team ID	PNT2022TMID21848
Project Name	Early Detection of Chronic Kidney Disease using Machine Learning
Maximum Marks	

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, behavior, and other aspects of the software to project.
- Define development phases and solution requirements.
- Provide specifications according to which the solution is defined and delivered.
